 Starbucks recalls sandwiches over listeria concerns

Breakfast sandwiches sold at 250 Starbucks stores have been recalled by the U.S. Food & Drug Administration (FDA) for potential listeria contamination.

The 6-ounce packaged sandwiches, made by Progressive Gourmet Inc, are sausage, egg and cheddar cheese on English muffins. They were sold marked with “Best Before: 07-Aug-2016” on top of the package.

The recalled sandwiches were possibly sold at select Starbucks stores in Arkansas, Texas and Oklahoma on March 3 and March 4. According to the FDA, the impacted product was removed from the 250 stores that potentially received it as soon as Starbucks was informed of the possible issue.

Routine testing found the presence of *Listeria monocytogenes* on a contact surface within the production facility. No illnesses have been reported.

According to the FDA, listeria can cause serious and sometimes fatal infections in young children, the elderly, or others

with weakened immune systems. If infected, healthy individuals may experience short-term symptoms such as high fever, severe headache, stiffness and nausea.

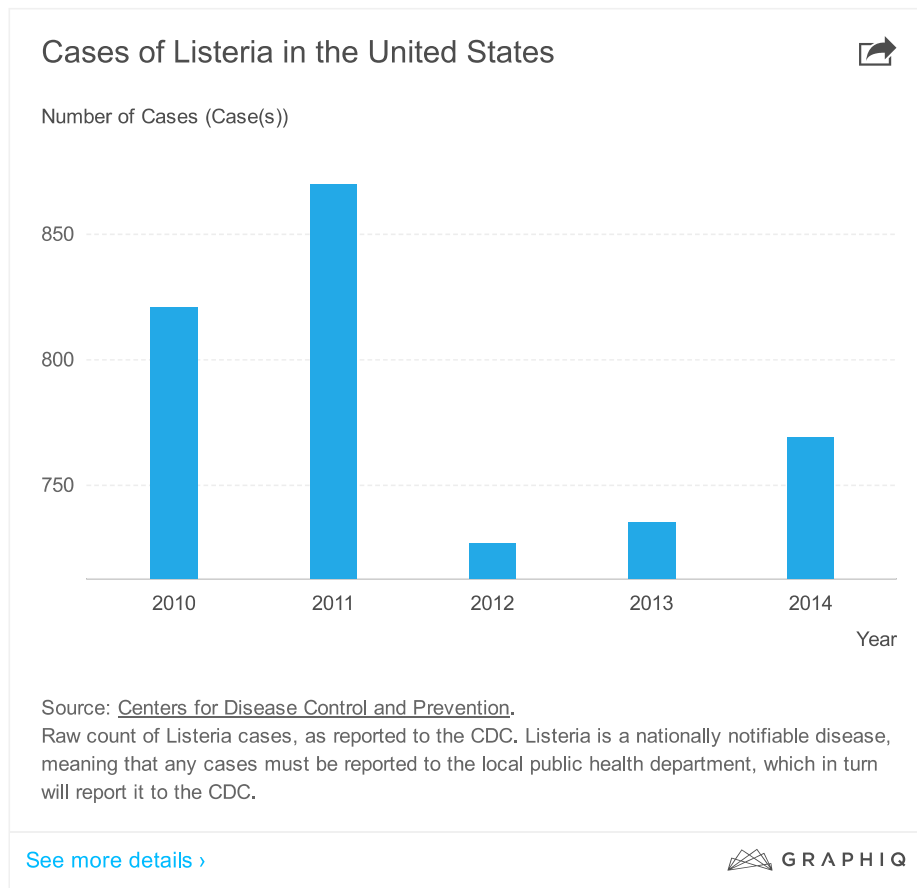

Consumers are urged to return the packaged sandwiches to the place of purchase for a full refund. Individuals with questions may contact the company at 1-800-224-7630 (9:00 am-5:00 pm Monday through Friday EST).
